POPPLE LSO
The first clinically-informed maternity back brace.

# 50 *percent*

Pregnancy-related lower back and pelvic girdle pain affects up to 50% of women, particularly in the third trimester. Hormonal and biomechanical changes—such as increased lumbar lordosis, anterior pelvic tilt, and ligamentous laxity from elevated relaxin—shift the center of gravity forward, increasing stress on the lumbosacral spine and pelvic structures. This often results in pain involving the SI joints, symphysis pubis, and surrounding musculature.

Despite its prevalence, there are few effective solutions available. Most maternity supports and belly bands offer minimal structural reinforcement and fail to adequately address the underlying biomechanical strain, leaving many patients without meaningful relief.

INTRODUCING

# The First Clinically-Informed Maternity Back Brace

# POPPLE *LSO*

**Popple LSO** is the first clinically backed maternity spine brace designed in collaboration with OB/GYNs and leading spine physicians to enhance comfort, mobility, and patient outcomes.

By easing pain and improving stability, Popple empowers patients to stay active throughout pregnancy—a key factor in healthier outcomes for both mother and baby. Thoughtfully designed to extend through the postpartum period, it continues to support spinal and abdominal recovery as the body rebalances.

Developed specifically for the anatomical and biomechanical needs of pregnancy, Popple:

- Delivers stabilization to the lower spine
- Provides gentle lift to the belly, supporting anterior load
- Designed to help ease common discomforts such as low back, pelvic girdle, and round ligament pain
- Encourages better posture and pelvic alignment as the body changes
- Provides gentle, structured support without restricting natural fetal movement

*"Popple has been life-changing for patients experiencing back and pelvic pain during pregnancy. This brace allows them to stay active and engaged in their daily activities, supporting both their physical health and mental wellbeing."*

Caroline Haakenson
MD (OB/GYN)

## Prescribing Popple LSO

Popple™ LSO is classified as durable medical equipment (DME) and can be prescribed for at-home use during pregnancy and postpartum recovery. Each DME product has a specific insurance billing code, called an HCPCS code, which identifies the brace type for insurance coverage and reimbursement. Once prescribed, a DME provider manages product fitting, delivery, and billing on your behalf—similar to the process for a breast pump.

**Popple LSO is PDAC approved for HCPCS codes:**

- **L0648/L0631**
- **L0650/L0637**

### IN-CLINIC BILLING

Our billing and support team can assist with getting your facility up and running to bill for DME.

### OUTSOURCE DME

Our team can connect you with a distributor partner to supply your patients with Popple.

## More about Popple LSO

### ANTERIOR LOAD SUPPORT

Provides a gentle cradle of support without inhibiting pelvic floor activation, supporting the anterior load to assist with normalizing the patient's center of gravity.

### SPECIFICALLY DESIGNED COMPRESSION SYSTEM

Features a new patented TriTrack™ compression system made for pregnant women to gently support the lower back and pelvis. When applied while lying down with knees bent, it can help maintain a neutral pelvic position, easing pregnancy-related back pain.

### CUSTOMIZED LEVEL OF SUPPORT

Panels can be removed for a low-profile belt for highly effective relief in any configuration.

### ADAPTABLE THROUGH PREGNANCY

Adjustable arms and straps can be lengthened or shortened for optimal comfort, compression, and mobility. After birth, the brace can also be resized to support the body during postpartum recovery.

### THERAPY PACK COMPATIBLE

Hot/Cold therapy is an additional modality for symptom management and cold therapy following cesarean recovery (sold separately).

**Contact us to learn more about implementing Popple into your practice.**

*I was able to kneel down and bathe my kids with no pain for the first time in a month."*

Patient using Popple LSO

## Connected by care, rooted in strength.

Like the Popple trees that share one foundation, our design brings women and their care teams together through support that grows with them.

### PART NUMBERS

| | |
|---|---|
| Popple 631 LSO - Small - 31-37 in (78.74-93.98 cm) | PPL312 |
| Popple 631 LSO - Medium - 36-48 in (91.44-121.92 cm) | PPL313 |
| Popple 631 LSO - Large - 47-68 in (119.38-172.72 cm) | PPL314 |
| Popple 637 LSO - Small - 31-37 in (78.74-93.98 cm) | PPL372 |
| Popple 637 LSO - Medium - 36-48 in (91.44-121.92 cm) | PPL373 |
